

Here is a quick Infographic I have made to remember the different roles in Scrum Methodology

# SCRUM ROLES

## SCRUM MASTER

The person who is responsible for facilitation/coaching the Development Team and the Product Owner to work on the day-to-day development of activities.

## THE PRODUCT OWNER

The Product owner is the voice of the customer/stakeholders and hence is responsible for bridging the gap between the development team and stakeholders.

## DEVELOPMENT TEAM

The Development Team comprises developers proficient in their area of expertise. The development team works on implementing the potentially deliverable.

## SUBJECT MATTER EXPERT (SME's)

Subject matter experts, also called SMEs, are professionals with advanced knowledge in a specific field. As an authority in a particular area or topic, they are uniquely qualified to provide guidance and strategy.

## TECHNICAL PROJECT MANAGER

They focus on the work of program managers from a technical standpoint, often playing a more hands-on role than traditional Program Managers

## FUNCTIONAL MANAGER

The functional manager is the person who has management authority within a business unit/department with direct supervision over one or more resources on the project/program team and/or direct responsibility for the functions affected by or that affect the project/program deliverables.
