If you are like me, sometimes, when creating a Custom Object in a Salesforce org, you forget to click the checkbox next to create a custom tab, and then you cannot locate your Custom Object in your Salesforce Org. Did you know you can add it later with Custom Tabs?

To add tabs to a Custom Object:

- Go to **Setup**
- Search for **Tabs** in the Quick Find Box
- Click **Tabs**
- Create **New**
- Choose the **Custom Object** from the dropdown box
- Choose a **Tab style** (Icon)
- ***Enter a description***
- Click **Next**
- Click **Next**

Now, your problem is fixed. Now you can pretend your mistake didn't happen and move on to other issues.
